

Using Endoscopy to PREVENT, FIND & TREAT CANCERS of the Digestive System

Friday, March 16, 2018 | 10 a.m.

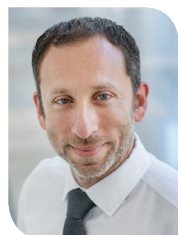

Capital Health – Hamilton

1445 Whitehorse-Mercerville Road, Hamilton, NJ, 08619

Wednesday, May 23, 2018 | 5 p.m.

Capital Health Medical Center – Hopewell

NJ PURE Conference Center, One Capital Way, Pennington, NJ 08534

Gastrointestinal (GI) cancer is a broad term for cancers that start in or spread to the esophagus, stomach, colon, pancreas, and other organs in the digestive system. Interventional gastroenterology uses non-surgical techniques to diagnose and treat GI cancer using an endoscope, a thin flexible tube that is passed through the digestive system. Join DR. JASON ROGART, director of Interventional Gastroenterology and Therapeutic Endoscopy at the Capital Health Center for Digestive Health and Capital Health Cancer Center, for a discussion about the risk factors for cancers of the digestive system and what state-of-the-art testing and non-surgical treatments are available for you right here in your community.
